- 12** Notifications, updates, and suggestions
- 13** Account settings and language
- 14** Safety and privacy
- 15** Help and Support
- 16** Troubleshooting

1. Welcome to PeepLink

PeepLink is an adults-only web app for discovering and following people, professionals, venues, and community activity. Your account is one public identity. Professional details add optional business, category, venue, and check-in information to that identity.

PeepLink check-ins show an intentionally shared venue-based presence. They are not continuous background person tracking.

2. Open PeepLink on the web

1. Visit **peepLinkapp.com/app** in a current browser.
2. Use PeepLink directly in the browser, or install it later from your Account screen.
3. Keep a network connection for account, search, map, invite, and connection actions.

No App Store or Google Play download is required.

3. Create an account

1. On the Welcome screen, select **Create Account**.
2. If you received a trusted PeepLink invite, paste its link before continuing so the invite stays attached.
3. Choose **Create account with Google**, or enter a public display name, private sign-in email, and a password of at least eight characters.
4. Confirm your email if PeepLink asks you to do so.
5. Complete the Terms, date-of-birth, and 18-or-older acceptance steps.

Your sign-in email stays private unless you separately add a public contact email to your profile.

4. Sign in and recover access

Select **Sign In**, then use your email and password or **Continue with Google**. Apple sign-in is not offered in the current web app.

Select **Forgot password?** to request a secure reset email. Open the link in that message and return to PeepLink to choose a new password.

5. Install the web app

Installing is optional. It adds a PeepLink icon and opens the same web account in a focused app window.

Device	Install steps
iPhone or iPad	Open PeepLink in Safari. Tap Share, choose Add to Home Screen , then tap Add.
Android	Open PeepLink in Chrome. Open the browser menu, then choose Install app or Add to Home screen .
Mac or Windows	Open PeepLink in Chrome or Edge. Select the install icon in the address bar and confirm Install.

Reopen the instructions any time from **Account > Install PeepLink**.

6. Main navigation

- **Search:** discover people, categories, venues, and local activity.
- **Map:** browse venue-based results, followed places, and visible professional activity.
- **Invite:** open your Identity Link, QR, and invitation tools.
- **Following:** review connections, requests, and followed venues.
- **Account:** manage identity, installation, professional tools, privacy, and support options.

The bell opens notifications. The floating QR button opens your personal Identity Link.

7. Search and Discovery

1. Open **Search** to browse current discovery results or enter a name, category, service, venue, or area.
2. Use available result filters and date, distance, or location controls to narrow the view.
3. Select a person, band, venue, or category to view available public details.
4. Follow an item only when you want it added to your connections or discovery preferences.

Results depend on public visibility, moderation, safety rules, location context, and available community data.

8. Connections and profiles

Open **Following** to review people, follower requests, and followed venues. From a public profile, you may be able to follow, unfollow, block, report, or view professional details. Public contact fields appear only when that member chose to share them.

9. Invites, Identity Links, and QR

- Your permanent Identity Link and QR point to your PeepLink identity.
- A general invite helps another person join and connect.
- A professional invite can include professional information for the recipient to review and claim.
- Use Copy, Share, QR, email, or SMS options only with the intended recipient.
- Review sent and received invite status from the Invite area.

Do not post private invite links or codes where unintended people can use them.

10. Professional tools and check-ins

Members with professional features can use **Account** to manage professional details, categories, venues, availability, map preferences, and check-ins.

1. Open **Account > Venue & Check-In**.
2. Choose an eligible venue and review what will become visible.
3. Start a check-in only when you intend to share your venue-based presence.
4. Check out when that presence should end.

Payment or Tip Settings may show unavailable or coming-soon states. Only use payment controls that PeepLink currently enables for your account.

11. Map and saved areas

1. Open **Map** and allow location access only if you want nearby results.
2. Search the visible area or use the available people, venue, category, and activity controls.
3. Select a venue-based marker to view public details.
4. Use Map Preferences or saved areas to make repeat discovery faster.

Markers represent venues and explicit public activity, not precise background tracking of members.

12. Notifications, updates, and suggestions

- Select the bell or open **Account > Notification Center** to review durable in-app alerts.
- Mark individual notifications or all notifications read when those controls are available.
- Open **PeepLink Updates** for product news and practical tips.
- Open **Suggestions** to submit ideas and vote on community suggestions.

13. Account settings and language

Account Settings manages your display name, photo, account type, search visibility, and optional public contact fields. Your private sign-in email is separate from your public profile.

Use **Language / Idioma** to choose English or Spanish on the current device. Sign out from the bottom of the Account screen when you finish on a shared device.

14. Safety and privacy

- PeepLink is for adults 18 and older.
- Use profile Block or Report actions and the Account Safety Center when needed.
- Keep passwords, reset links, authentication details, and private invitation links secret.
- Review the current Terms of Use and Privacy Policy at peeplinkapp.com.
- Account deletion is permanent. Read the warning carefully before confirming it.

15. Help and Support

Email support@peeplinkapp.com or visit peeplinkapp.com/support.

1. Take a screenshot showing the issue.
2. Note your device, browser, and what you were doing immediately before it happened.
3. Contact PeepLink Support and attach the screenshot after removing private information.
4. Never send passwords, reset links, tokens, full invitation links, or authentication identifiers.

16. Troubleshooting

A screen looks stale

Use the browser refresh control. If PeepLink shows that an update is ready, open **Account > Install PeepLink** and choose Update now.

Sign-in does not work

Confirm connectivity, check that you selected the correct Sign In or Create Account mode, and try email/password if Google is unavailable.

The install option is missing

Use Safari on iPhone or iPad, Chrome on Android, or Chrome/Edge on a computer. You can always keep using PeepLink in the browser without installing it.

Location or map results are unavailable

Review browser location permission, search a place manually, or choose a saved area. PeepLink still requires network access for current results.
